

## **Gopher (Richardson's ground squirrel) Control Program – May 2022**

The technician that will be conducting this service has a special certification from the Alberta Government to conduct the Gopher baiting. The area to be treated has been agreed upon between Orkin Canada and the Summer Village of Beach and has been mapped out.

Our gopher control service involves placing a product called Rozol, in the form of treated grain, 12 to 15 inches into the gopher tunnel entrances and then back filling the holes. Backfilling prevents any secondary poisoning to pets or other creatures.

There is frequent follow up services to remove any dead gophers and to rebait and back fill holes as needed.

An SDS and Label for the product has been supplied to the Summer Village of Sandy Beach and is available upon request.
